

AM-PAY FINTECH

The AM-Pay Business Model

The payments arm of Albatross Money — an expanded narrative, in full, of how it is built, who it serves and how it earns.

01 — WHO WE ARE

Businesses that are seen clearly can be lent to fairly.

AM-Pay is the payments arm of Albatross Money, a licensed South African credit provider (NCR NCRCP9166) built around that simple conviction. Where Albatross Money extends credit, AM-Pay moves the money behind it — giving micro-merchants, township traders and independent lenders a single, transparent rail for collecting, paying out and understanding their own cash flow.

Every transaction it processes sharpens that picture, turning everyday payment activity into the visibility mainstream banking rarely extends to the businesses that need it most.

“Not a side project bolted onto a lending book — AM-Pay is being built as its own payments platform, one that happens to have, in Albatross Money, an owner who is also its first customer.”

Payments data becomes lending intelligence

For every merchant or borrower who transacts through AM-Pay, a pattern of income, reliability and cash-flow behaviour builds up automatically — the same picture a bank would want before extending credit, gathered as a by-product of doing business rather than through a lengthy application. That mechanism does not change from phase to phase; what it is applied to does, and each phase adds its own layer of value.

PHASE 1 VALUE

Reliable collections, verified income

A mandate-backed, Netcash-processed DebiCheck rail replaces manual debit-order admin. Every collection — successful or failed — is a live data point on a borrower's reliability.

PHASE 2 VALUE

A growth engine for the merchant base

Every business trading through Pay Now generates a verifiable revenue history simply by making sales — turning businesses with no credit history into scoreable lending prospects.

PHASE 3 VALUE

Real-time visibility, embedded finance

Same-day sales visibility, online and in person, in one dashboard. Real-time trading velocity is the foundation for merchant cash advances priced against actual volume.

- **Merchants & lenders** — a single, transparent rail for collecting, paying out and reconciling money.
- **Albatross Money** — sharper, faster, fairer underwriting on real transaction history, not self-reported data.
- **The NCR-registered market** — the same infrastructure offered outward, once proven, to other credit providers.

Five segments, one widening curve

Each segment sits at a different point on the same curve: the more of them AM-Pay serves, the more transaction data flows back into Albatross Money's underwriting.

FIRST CLIENT

Albatross Money

Live today as the platform's internal test case — every feature ships on its own loan book, validated in production, before it is sold to anyone else.

NCR-registered lenders

Offered the same DebiCheck infrastructure once proven. The debit-order market extends beyond micro-lending to bond/rent, vehicle finance, insurance and utilities.

Developers & online sellers

Web/app developers, franchise and food-service outlets — Phase 2's core Pay Now audience, needing a hosted checkout they don't have to build.

Independent service providers

Hairdressers, beauticians and sole operators who today share personal banking details, and can instead send a simple, traceable payment link.

PHASE 4

Employers & employees

Companies that need a single payroll platform — and, behind every employer, individual salaried employees: AM-Pay's first consumer-facing segment.

A phased go-to-market

Four deliberate phases, not one simultaneous launch. Each is proven internally on Albatross Money before it is opened up to outside merchants and lenders — the platform is always selling a track record, not a promise.

- 1

DebiCheck Onboarding

IN ACTIVE BUILD

A dedicated application, hosted on Microsoft Azure, through which Albatross Money captures a customer's ID, banking details and loan requirements, and generates a DebiCheck mandate processed via Netcash. Albatross Money is the first live customer and test case, ahead of the platform being offered to other NCR-registered lenders.
- 2

Pay Now Checkout

PLANNED

A hosted payment-page solution for developers, online sellers, franchise and food-service outlets, and independent service providers — with a merchant dashboard for transaction visibility, payouts and CSV reconciliation. These merchants also become a lending pipeline for Albatross Money.
- 3

Point of Sale & Ecosystem

PLANNED

White-labelled POS devices give in-person merchants same-day sales visibility inside the AM-Pay dashboard, rather than waiting on standard bank settlement reporting — extending, over time, to a single ecosystem in which merchants, their customers and their employees can all transact.
- 4

Payroll & Wage Disbursement

PROPOSED

A platform through which employers pay their staff — a push-payment (disbursement) capability, structurally distinct from DebiCheck's pull-collection model in Phase 1.

Employer onboarding KYB capture, employee roster import (CSV/API), per-employee banking verification (AVS).	Payroll run engine Configurable pay cycles, gross-to-net calculation, PAYE/UIF/SDL deduction hooks.	Disbursement rail Bulk/batch EFT via Netcash's bulk payment API, remittance reference per employee.
Payslips Automated PDF generation, delivered by email, SMS link or self-service portal.	Employee self-service View payslips, confirm banking details, and, in time, request early wage access.	Compliance & audit POPIA-aligned data handling, full audit log per run, SARS EMP201/EMP501 hooks.

Every payroll run is a verified income record for a named individual, not just a business — extending the same payments-become-lending-intelligence mechanism down to the level of the individual employee, and opening consumer lending and earned-wage-access products for Albatross Money.

Each phase is also a channel

AM-Pay's channels are, deliberately, the same as its phased rollout — and every merchant, regardless of channel, is given a dashboard as the primary ongoing touchpoint: visibility and self-service first, human support where it is genuinely needed.

DebiCheck app

Direct channel for Albatross Money, and later other lenders, to originate mandates.

Pay Now & dashboard

Self-service for developers and merchants via API and a web dashboard.

White-label POS

Physical, in-person channel feeding the same dashboard as the others.

Payroll & employee portal

Reaches employers directly, and employees through payslips and, in time, wage access.

Activities, resources, partnerships

Key Activities

- Onboarding merchants and lenders compliantly, at pace
- Processing transactions securely over Netcash's rails
- Building dashboards & reconciliation tools
- Feeding transaction data into lending decisions
- Compliance & risk management (PCI DSS, FICA/AML-KYC)

Key Resources

- Microsoft Azure hosting
- Netcash APIs & ISV status, sandbox already active
- Albatross Money's NCR licence (NCRCP9166)
- Albatross Money's existing lending book & client base
- In-house development capability

Key Partnerships

- Netcash — payments rail & ISV Partner Programme
- Microsoft Azure — cloud hosting partner
- NCR-registered lenders & merchants — customers and referenceable partners
- Future: POS hardware and HR/payroll software partners

Revenue & cost structure

Revenue Streams

Service fee — AM-Pay's markup on Netcash's settlement fee, on every transaction, across all four phases.

ISV rebate — transactions recorded against AM-Pay's own Netcash ISV number.

Dashboard fee — monthly, for Pay Now merchants using the reconciliation dashboard.

Payroll service fee (Phase 4) — per-employee or per-run, with room for a wage-access fee in time.

Internal value creation — a stronger Albatross Money lending book, from merchants to employees.

Cost Structure

Cloud infrastructure — Azure hosting for the onboarding app, dashboard and POS/ecosystem layer.

Compliance — PCI DSS (SAQ A tier expected) and FICA/AML-KYC registration and reporting.

Development & API integration — the in-house build across all four phases.

Merchant & lender support — onboarding and day-to-day query handling as the base grows.

08 — WHY NETCASH

AM-Pay is onboarding as an ISV under the Netcash Partner Programme to deliver DebiCheck and Pay Now on a proven, compliant rail — with a sandbox already active and API testing under way.

Albatross Money — already an active NCR-registered credit provider — is our first client, giving Netcash a live, referenceable case from day one, with further merchants already in active discussion. Read together with the Business Model Canvas, this document is the full picture: the canvas shows how the elements fit together at a glance; this narrative sets out, in AM-Pay's own words, why each of them is built the way it is.
