

The Netcash system allows for automated integration of all services via web services. This document is to note key integration required for services based on our discussions.

The scope of technical integration required is detailed as follows:

General

- Service Key Management – Validate and manage Netcash service keys linked to your account. [Click here](#)
- Bank Account Validation – Verify bank account details before processing transactions. [Click here](#)
- Statement Download – Retrieve all settled transactions for a specific date. [Click here](#)
- Statement Format – View the structure and fields contained in statement files. [Click here](#)
- Reconciliation – Reconcile transactions using statement data returned by Netcash. [Click here](#)
- Available Balance – Retrieve the available balance for a Netcash account. [Click here](#)
- Funds Release – Transfer available funds to a registered bank account. [Click here](#)
- NetAccess* – Allow users to access the Netcash Mobi site directly from your software. [Click here](#)

Payments

- Batch Payments – Submit salary and creditor payment batches for same-day or dated processing. [Click here](#)
- Action Date Validation* – Check valid banking dates before processing payments. [Click here](#)
- Load Report – View batch validation results, including itemised errors and rejections. [Click here](#)

Pay Now

- eCommerce Payments – Accept once-off and recurring online payments. [Click here](#)
- Subscription Updates – Modify existing recurring payment subscriptions. [Click here](#)
- Billing Footers – Add payment links to invoices, statements, and other documents. [Click here](#)
- Payment Requests* – Send customers payment links via SMS or email. [Click here](#)

Debit Orders

- eMandates* – Create and manage electronic debit order mandates. [Click here](#)
- Synchronous eMandate – Generate and retrieve an electronic mandate in real time. [Click here](#)
- Action Date Validation* – Check debit order action dates against valid banking days. [Click here](#)
- DebiCheck Authentication (TT2 & Delayed TT1) – Submit batch-based DebiCheck authentications. [Click here](#)
- DebiCheck Authentication (Real-Time TT1) – Authenticate mandates instantly via real-time DebiCheck. [Click here](#)
- Debit Order Batch Upload – Submit two-day, same-day, or tokenised credit card debit batches. [Click here](#)
- Debicheck Batch Upload – Submit two-day, same-day, or tokenised credit card debit batches. [Click here](#)
- Load Report – View file validation results, including itemised errors and rejections. [Click here](#)

Value-added Services

* Optional / value-added functionality.

- All Available Web Services – Browse the full catalogue of Netcash web services and APIs. [Click here](#)
